DETAILED ACTION

1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 85-89 are rejected under 35 U.S.C. 103(a) as being unpatentable over Terasawa (4,739,847) in view of Kanome et al. (4,952,942).

Terasawa discloses an ink jet recording unit including an ink cartridge (30), attachable and detachable to an ink jet recording head (1), the cartridge including multiple chambers (32) for holding inks of different colors. However, Terasawa does not disclose that the ink jet recording head is provided integrally with different ink discharge port groups corresponding to inks different in coloring material density for forming an ink dot on the recording material. Kanome et al. discloses an ink jet recording apparatus including an integral orifice plate (2) with different discharge groups (M^1 , M^2) corresponding to inks differing in coloring material density.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to eject inks of different coloring material densities from a single orifice plate, as taught by Kanome et al, in the printer and cartridge of Terasawa, in order to print an image having a full color range with an abundant gradation characteristic (col. 2, lines 11-27).

Allowable Subject Matter

4. Claims 1, 4-14, 17-22, 25-30, 33-35, 37, 39, 41-53, 55-61 and 63-84 are allowed for the reasons cited in the previous office actions.

Response to Arguments

5. Applicant's arguments with respect to claims 85-89 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 2853

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
